Sandy Balls

CUSTOMER: Bergholt Building Services Ltd

Tonnes: 1,000

## The Contract

Sandy Balls Holiday Village based in the New Forest National Park, have made a £10m investment into building 108 brand new holiday lodges, with access, parking and landscaping works. Bergholt Building Services Ltd key supply chain requirements were both aggregate suitability and cost.

## Material Specification and Application

HCC Blend

## Reason for using IBA Aggregate

Bergholt felt that Fortis IBA Aggregate was more economical and suitable for sub-bases throughout the new development. As they were using it under areas that were going to be covered in asphalt, it allowed them to maintain the required thickness in line with their budget.

## Client Benefits

- More suitable as a sub-base for the site development.
- More cost-effective versus primary aggregates.
- Sustainable aggregate for a rural location - in keeping with the park.
